
Learning and Soft Computing: Support Vector Machines, Neural Networks, and Fuzzy Logic Models (Complex Adaptive Systems)

By Vojislav Kecman

Learning and Soft Computing: Support Vector Machines, Neural Networks, and Fuzzy Logic Models (Complex Adaptive Systems) By Vojislav Kecman

This textbook provides a thorough introduction to the field of learning from experimental data and soft computing. Support vector machines (SVM) and neural networks (NN) are the mathematical structures, or models, that underlie learning, while fuzzy logic systems (FLS) enable us to embed structured human knowledge into workable algorithms. The book assumes that it is not only useful, but necessary, to treat SVM, NN, and FLS as parts of a connected whole. Throughout, the theory and algorithms are illustrated by practical examples, as well as by problem sets and simulated experiments. This approach enables the reader to develop SVM, NN, and FLS in addition to understanding them. The book also presents three case studies: on NN-based control, financial time series analysis, and computer graphics. A solutions manual and all of the MATLAB programs needed for the simulated experiments are available.

Learning and Soft Computing: Support Vector Machines, Neural Networks, and Fuzzy Logic Models (Complex Adaptive Systems) By Vojislav Kecman Bibliography

- Sales Rank: #1914523 in Books
- Published on: 2001-03-19
- Ingredients: Example Ingredients
- Original language: English
- Number of items: 1
- Dimensions: 9.00" h x 1.25" w x 7.00" l, 2.71 pounds
- Binding: Hardcover
- 608 pages

Editorial Review

Review

Kecman has many years of teaching and research experience, so naturally he does an excellent job of presenting the essence of learning and soft computing using neural networks, fuzzy logic, and statistics.

(**Zoran Gajic**, Department of Electrical and Computer Engineering, Rutgers University)

This book provides an excellent in-depth description of modern learning and soft computing methodologies. Accompanying software implementation of learning algorithms makes this text especially valuable for practitioners and graduate students interested in applications of predictive learning.

(**Vladimir Cherkassky**, Department of Electrical and Computer Engineering, University of Minnesota, Twin Cities)

This outstanding volume unifies the concepts of learning, neural networks, support vector machines, and fuzzy logic! It offers a clear presentation and numerous examples followed by end-of-chapter problems. These things along with the accompanying software make the book a favorite candidate for the leading academic text and an indispensable reference for soft computing professionals.

(**Jacek M. Zurada**, S.T. Fife Professor of Electrical and Computer Engineering, University of Louisville, and Editor-in-Chief, *IEEE Transactions on Neural Networks*)

About the Author
Vojislav Kecman is Professor in the Computer Science Department at Virginia Commonwealth University, Richmond, VA.

Users Review

From reader reviews:

Arthur West:

What do you think about book? It is just for students because they are still students or that for all people in the world, exactly what the best subject for that? Just simply you can be answered for that problem above. Every person has distinct personality and hobby for every other. Don't to be pressured someone or something that they don't wish do that. You must know how great along with important the book Learning and Soft Computing: Support Vector Machines, Neural Networks, and Fuzzy Logic Models (Complex Adaptive Systems). All type of book are you able to see on many options. You can look for the internet methods or other social media.

Douglas Whatley:

The reason why? Because this Learning and Soft Computing: Support Vector Machines, Neural Networks, and Fuzzy Logic Models (Complex Adaptive Systems) is an unordinary book that the inside of the book waiting for you to snap it but latter it will zap you with the secret the idea inside. Reading this book beside it was fantastic author who all write the book in such remarkable way makes the content within easier to understand, entertaining approach but still convey the meaning fully. So , it is good for you because of not hesitating having this nowadays or you going to regret it. This amazing book will give you a lot of rewards than the other book include such as help improving your expertise and your critical thinking method. So , still want to hold up having that book? If I had been you I will go to the book store hurriedly.

Richard Ybarra:

Are you kind of active person, only have 10 or perhaps 15 minute in your time to upgrading your mind ability or thinking skill even analytical thinking? Then you are receiving problem with the book as compared to can satisfy your limited time to read it because pretty much everything time you only find book that need more time to be study. Learning and Soft Computing: Support Vector Machines, Neural Networks, and Fuzzy Logic Models (Complex Adaptive Systems) can be your answer because it can be read by an individual who have those short extra time problems.

Derek Clancy:

Many people said that they feel weary when they reading a guide. They are directly felt this when they get a half parts of the book. You can choose typically the book Learning and Soft Computing: Support Vector Machines, Neural Networks, and Fuzzy Logic Models (Complex Adaptive Systems) to make your personal reading is interesting. Your personal skill of reading talent is developing when you including reading. Try to choose simple book to make you enjoy to learn it and mingle the feeling about book and looking at especially. It is to be 1st opinion for you to like to start a book and go through it. Beside that the e-book Learning and Soft Computing: Support Vector Machines, Neural Networks, and Fuzzy Logic Models (Complex Adaptive Systems) can to be your brand new friend when you're sense alone and confuse in doing what must you're doing of that time.
