The Rat Brain in Stereotaxic Coordinates, Seventh Edition By George Paxinos, Charles Watson

Since its first edition in 1982, the Paxinos and Watson rat brain atlas has become the most trusted source of accurate coordinates and anatomical information in laboratories throughout the world. It has been cited over 60,000 times, making it the most cited publication in neuroscience. The seventh edition incorporates new findings on developmental gene expression and presents the boundaries of neuromeres in sagittal sections.

- 161 thoroughly revised coronal diagrams and accompanying photographic plates spaced at 120 μm intervals
- 19 thoroughly revised sagittal diagrams and accompanying photographic plates
- 27 thoroughly revised horizontal diagrams and accompanying photographic plates
- Photographic plates printed from high resolution digital images in color
- Diagrams of all spinal cord segments
- The most accurate and virtually universally used stereotaxic coordinate system
- Neuromeric segments delineated in sagittal sections
- A 'mini-atlas' of 14 diagrams to assist beginning students of neuroanatomy
- Over 1000 structures identified
- Electronic diagrams available to purchasers of this book via a companion web site (<http://booksite.elsevier.com/9780123919496/>)

Editorial Review

Review

"...this version contains 161 revised coronal diagrams with accompanying photographic plates of microtome slides taken at 120 micrometer intervals through the brain from its anterior to posterior end...The book will be useful to students and teachers of neuroanatomy in medical schools, with additional uses in neurological research and specialist veterinary medicine." --**ProtoView.com, March 2014**

From the Back Cover

Since its first edition in 1982, the Paxinos and Watson rat brain atlas has become the most trusted source of accurate coordinates and anatomical information in laboratories throughout the world. It has been cited over 60,000 times, making it the most cited publication in neuroscience. The seventh edition incorporates new findings on developmental gene expression shows the boundaries of neuromeres in the diencephalon and brainstem.

About the Author

Professor George Paxinos, AO (BA, MA, PhD, DSc) completed his BA at The University of California at Berkeley, his PhD at McGill University, and spent a postdoctoral year at Yale University. He is the author of almost 50 books on the structure of the brain of humans and experimental animals, including *The Rat Brain in Stereotaxic Coordinates*, now in its 7th Edition, which is ranked by Thomson ISI as one of the 50 most cited items in the Web of Science. Dr. Paxinos paved the way for future neuroscience research by being the first to produce a three-dimensional (stereotaxic) framework for placement of electrodes and injections in the brain of experimental animals, which is now used as an international standard. He was a member of the first International Consortium for Brain Mapping, a UCLA based consortium that received the top ranking and was funded by the NIMH led Human Brain Project. Dr. Paxinos has been honored with more than nine distinguished awards throughout his years of research, including: The Warner Brown Memorial Prize (University of California at Berkeley, 1968), The Walter Burfitt Prize (1992), The Award for Excellence in Publishing in Medical Science (Assoc Amer Publishers, 1999), The Ramaciotti Medal for Excellence in Biomedical Research (2001), The Alexander von Humbolt Foundation Prize (Germany 2004), and more.

Charles Watson is a specialist in the area of brain and spinal cord mapping. He graduated in medicine from the University of Sydney in 1967 and was awarded a research doctorate (MD) by the University of New South Wales in 1974. He lectured in anatomy at the UNSW from 1970 to 1982, when he took up a career in public health in the Health Department of Western Australia, being appointed Chief Health Officer for WA in 1993.

He returned to university life in 1994, holding the position of Dean of Health Sciences at the University of Wollongong and Curtin University until 2006. Since then he has held research positions at Curtin and at Neuroscience Research Australia. Since 2006 he has published 11 books and over 40 journal articles.

Watson was made a member of the Order of Australia (AM) in 2004. He earned a DSc (by thesis) from the

University of Sydney in 2012.

In his spare time he swims in the ocean, and he is an enthusiastic but mediocre player of the baritone saxophone. His musical favourites are Frank Zappa, Brian Eno, and Beethoven.

Users Review

From reader reviews:

Shawn Macdonald:

Do you have favorite book? For those who have, what is your favorite's book? Book is very important thing for us to learn everything in the world. Each reserve has different aim as well as goal; it means that publication has different type. Some people truly feel enjoy to spend their time and energy to read a book. These are reading whatever they consider because their hobby is usually reading a book. What about the person who don't like reading a book? Sometime, individual feel need book whenever they found difficult problem or even exercise. Well, probably you will require this The Rat Brain in Stereotaxic Coordinates, Seventh Edition.

Gabrielle Oneal:

What do you in relation to book? It is not important with you? Or just adding material when you require something to explain what the ones you have problem? How about your spare time? Or are you busy man or woman? If you don't have spare time to perform others business, it is make one feel bored faster. And you have free time? What did you do? Every individual has many questions above. They need to answer that question simply because just their can do that. It said that about reserve. Book is familiar in each person. Yes, it is correct. Because start from on jardín de infancia until university need this The Rat Brain in Stereotaxic Coordinates, Seventh Edition to read.

Samuel Brooks:

Hey guys, do you desires to finds a new book to read? May be the book with the headline The Rat Brain in Stereotaxic Coordinates, Seventh Edition suitable to you? Typically the book was written by popular writer in this era. The actual book untitled The Rat Brain in Stereotaxic Coordinates, Seventh Edition is the main of several books in which everyone read now. This specific book was inspired many men and women in the world. When you read this reserve you will enter the new shape that you ever know prior to. The author explained their concept in the simple way, so all of people can easily to comprehend the core of this guide. This book will give you a wide range of information about this world now. To help you to see the represented of the world in this book.

Amy Nichols:

Reading a guide tends to be new life style on this era globalization. With reading you can get a lot of information that may give you benefit in your life. Along with book everyone in this world may share their idea. Textbooks can also inspire a lot of people. A great deal of author can inspire their reader with their

story or maybe their experience. Not only situation that share in the publications. But also they write about advantage about something that you need illustration. How to get the good score toefl, or how to teach children, there are many kinds of book that exist now. The authors on earth always try to improve their ability in writing, they also doing some exploration before they write with their book. One of them is this The Rat Brain in Stereotaxic Coordinates, Seventh Edition.
