The Silicon Cycle: Human Perturbations and Impacts on Aquatic Systems (Scientific Committee on Problems of the Environment (SCOPE) Series)

From Brand: Island Press

Silicon is among the most abundant elements on earth. It plays a key but largely unappreciated role in many biogeochemical processes, including those that regulate climate and undergird marine food webs.

The Silicon Cycle is the first book in more than 20 years to present a comprehensive overview of the silicon cycle and issues associated with it. The book summarizes the major outcomes of the project Land-Ocean Interactions: Silica Cycle, initiated by the Scientific Community on Problems of the Environment (SCOPE) of the International Council of Scientific Unions (ICSU). It tracks the pathway of silicon from land to sea and discusses its biotic and abiotic modifications in transit as well as its cycling in the coastal seas. Natural geological processes in combination with atmospheric and hydrological processes are discussed, as well as human perturbations of the natural controls of the silicon cycle.

Editorial Review

Review

"The authors in *The Silicon Cycle* are leading researchers in the field of silicon geochemistry, which makes for a great volume . . . The book deals not only with issues such as changes in the riverine dissolved silicate flux, but also with global warming and the associated changes in ocean circulation, which may have an enormous impact on the silicon cycle. The authors have a good balance in their discussions of silicon cycling in terrestrial and marine environments."

(Dave Demaster *North Carolina State University*)

"*The Silicon Cycle* is a unique and important volume. There is nothing else like it currently. It addresses authoritatively the growing interest in the role that Si plays in controlling other biogeochemical cycles . . . I will use this as both a research reference and a teaching tool."

(Jonathan Cole *Institute for Ecosystem Studies, Millbrook, NY*)

About the Author

Venugopalan Ittekkot is professor and Daniela Unger is research scientist at the Center for Marine Ecology in Bremen, Germany. Christoph Humborg is associate professor with the Institute of Applied Environmental Research, Stockholm University in Sweden. Nguyen Tac An is director of the Institute of Oceanography in Nha Trang, Vietnam.

Users Review

From reader reviews:

Michael Johnson:

Book is to be different for every single grade. Book for children until adult are different content. We all know that that book is very important for people. The book *The Silicon Cycle: Human Perturbations and Impacts on Aquatic Systems (Scientific Committee on Problems of the Environment (SCOPE) Series)* seemed to be making you to know about other understanding and of course you can take more information. It is quite advantages for you. The e-book *The Silicon Cycle: Human Perturbations and Impacts on Aquatic Systems (Scientific Committee on Problems of the Environment (SCOPE) Series)* is not only giving you more new information but also to become your friend when you feel bored. You can spend your current spend time to read your guide. Try to make relationship with the book *The Silicon Cycle: Human Perturbations and Impacts on Aquatic Systems (Scientific Committee on Problems of the Environment (SCOPE) Series)*. You never sense lose out for everything when you read some books.

Pete Plaisance:

The e-book untitled *The Silicon Cycle: Human Perturbations and Impacts on Aquatic Systems (Scientific Committee on Problems of the Environment (SCOPE) Series)* is the book that recommended to you to read.

You can see the quality of the book content that will be shown to anyone. The language that article author use to explained their way of doing something is easily to understand. The author was did a lot of analysis when write the book, so the information that they share for your requirements is absolutely accurate. You also will get the e-book of The Silicon Cycle: Human Perturbations and Impacts on Aquatic Systems (Scientific Committee on Problems of the Environment (SCOPE) Series) from the publisher to make you much more enjoy free time.

David Barnett:

It is possible to spend your free time to read this book this guide. This The Silicon Cycle: Human Perturbations and Impacts on Aquatic Systems (Scientific Committee on Problems of the Environment (SCOPE) Series) is simple to deliver you can read it in the park, in the beach, train and soon. If you did not possess much space to bring the actual printed book, you can buy often the e-book. It is make you easier to read it. You can save the particular book in your smart phone. Consequently there are a lot of benefits that you will get when you buy this book.

Nancy Maxfield:

In this era which is the greater man or who has ability to do something more are more precious than other. Do you want to become among it? It is just simple way to have that. What you must do is just spending your time little but quite enough to possess a look at some books. Among the books in the top collection in your reading list is The Silicon Cycle: Human Perturbations and Impacts on Aquatic Systems (Scientific Committee on Problems of the Environment (SCOPE) Series). This book which is qualified as The Hungry Hillside can get you closer in getting precious person. By looking way up and review this book you can get many advantages.
