The Vienna LTE-Advanced Simulators: Up and Downlink, Link and System Level Simulation (Signals and Communication Technology) By Markus Rupp, Stefan Schwarz, Martin Taranetz

This book introduces the Vienna Simulator Suite for 3rd-Generation Partnership Project (3GPP)-compatible Long Term Evolution-Advanced (LTE-A) simulators and presents applications to demonstrate their uses for describing, designing, and optimizing wireless cellular LTE-A networks.

Part One addresses LTE and LTE-A link level techniques. As there has been high demand for the downlink (DL) simulator, it constitutes the central focus of the majority of the chapters. This part of the book reports on relevant highlights, including single-user (SU), multi-user (MU) and single-input-single-output (SISO) as well as multiple-input-multiple-output (MIMO) transmissions. Furthermore, it summarizes the optimal pilot pattern for high-speed communications as well as different synchronization issues. One chapter is devoted to experiments that show how the link level simulator can provide input to a testbed. This section also uses measurements to present and validate fundamental results on orthogonal frequency division multiplexing (OFDM) transmissions that are not limited to LTE-A. One chapter exclusively deals with the newest tool, the uplink (UL) link level simulator, and presents cutting-edge results.

In turn, Part Two focuses on system-level simulations. From early on, system-level simulations have been in high demand, as people are naturally seeking answers when scenarios with numerous base stations and hundreds of users are investigated. This part not only explains how mathematical abstraction can be employed to speed up simulations by several hundred times without sacrificing precision, but also illustrates new theories on how to abstract large urban heterogeneous networks with indoor small cells. It also reports on advanced applications such as train and car transmissions to demonstrate the tools' capabilities.

Editorial Review

Users Review

From reader reviews:

Robert Jones:

The book *The Vienna LTE-Advanced Simulators: Up and Downlink, Link and System Level Simulation (Signals and Communication Technology)* can give more knowledge and also the precise product information about everything you want. Why must we leave a very important thing like a book *The Vienna LTE-Advanced Simulators: Up and Downlink, Link and System Level Simulation (Signals and Communication Technology)*? Wide variety you have a different opinion about publication. But one aim in which book can give many details for us. It is absolutely appropriate. Right now, try to closer along with your book. Knowledge or info that you take for that, you may give for each other; you could share all of these. Book *The Vienna LTE-Advanced Simulators: Up and Downlink, Link and System Level Simulation (Signals and Communication Technology)* has simple shape however you know: it has great and big function for you. You can appearance the enormous world by wide open and read a guide. So it is very wonderful.

Louise Richards:

Nowadays reading books be than want or need but also become a life style. This reading practice give you lot of advantages. The benefits you got of course the knowledge your information inside the book that improve your knowledge and information. The details you get based on what kind of book you read, if you want drive more knowledge just go with education and learning books but if you want sense happy read one having theme for entertaining for instance comic or novel. Typically the *The Vienna LTE-Advanced Simulators: Up and Downlink, Link and System Level Simulation (Signals and Communication Technology)* is kind of e-book which is giving the reader unpredictable experience.

Larry Boggs:

Information is provisions for anyone to get better life, information nowadays can get by anyone with everywhere. The information can be a know-how or any news even restricted. What people must be consider while those information which is inside former life are difficult to be find than now could be taking seriously which one would work to believe or which one the particular resource are convinced. If you receive the unstable resource then you get it as your main information you will have huge disadvantage for you. All those possibilities will not happen inside you if you take *The Vienna LTE-Advanced Simulators: Up and Downlink, Link and System Level Simulation (Signals and Communication Technology)* as the daily resource information.

Harvey Sanchez:

Hey guys, do you would like to finds a new book you just read? May be the book with the headline The Vienna LTE-Advanced Simulators: Up and Downlink, Link and System Level Simulation (Signals and Communication Technology) suitable to you? The actual book was written by well-known writer in this era. The particular book untitled The Vienna LTE-Advanced Simulators: Up and Downlink, Link and System Level Simulation (Signals and Communication Technology)is a single of several books this everyone read now. This specific book was inspired a lot of people in the world. When you read this book you will enter the new way of measuring that you ever know previous to. The author explained their strategy in the simple way, thus all of people can easily to comprehend the core of this reserve. This book will give you a wide range of information about this world now. So that you can see the represented of the world within this book.
