## **Multiple Solution Methods for Teaching Science in the Classroom: Improving Quantitative Problem Solving Using Dimensional Analysis and Proportional Reasoning** By Stephen DeMeo

For the first time in science education, the subject of multiple solution methods is explored in book form. While a multiple method teaching approach is utilized extensively in math education, there are very few journal articles and no texts written on this topic in science. Teaching multiple methods to science students in order to solve quantitative word problems is important for two reasons. First it challenges the practice by teachers that one specific method should be used when solving problems. Secondly, it calls into question the belief that multiple methods would confuse students and retard their learning.

Using a case study approach and informed by research conducted by the author, this book claims that providing students with a choice of methods as well as requiring additional methods as a way to validate results can be beneficial to student learning. A close reading of the literature reveals that time spent on elucidating concepts rather than on algorithmic methodologies is a critical issue when trying to have students solve problems with understanding. It is argued that conceptual understanding can be enhanced through the use of multiple methods in an environment where students can compare, evaluate, and verbally discuss competing methodologies through the facilitation of the instructor.

This book focuses on two very useful methods: proportional reasoning (PR) and dimensional analysis (DA). These two methods are important because they can be used to solve a large number of problems in all of the four academic sciences (biology, chemistry, physics, and earth science). This book concludes with a plan to integrate DA and PR into the academic science curriculum starting in late elementary school through to the introductory college level. A challenge is presented to teachers as well as to textbook writers who rely on the single-method paradigm to consider an alternative way to teach scientific problem

solving.

### **Editorial Review**

#### **Review**

"This book would be of tremendous value in pre- and inservice training for teachers from elementary through college... students will increase their skills in problem solving, critical thinking, and applying knowledge across the science curriculum." (Jean Worsley, reviewed in *The Science Teacher*, a journal published by NSTA)

"This book will be interesting and informative to both new and experienced high school and introductory college-level science teachers." (Jim Jetter, reviewed in the *Journal of Chemical Education*, a journal published by the American Chemical Society)

### **Users Review**

#### **From reader reviews:**

##### **Stanley Hanson:**

The particular book *Multiple Solution Methods for Teaching Science in the Classroom: Improving Quantitative Problem Solving Using Dimensional Analysis and Proportional Reasoning* will bring one to the new experience of reading the book. The author style to explain the idea is very unique. If you try to find new book you just read, this book very suited to you. The book *Multiple Solution Methods for Teaching Science in the Classroom: Improving Quantitative Problem Solving Using Dimensional Analysis and Proportional Reasoning* is much recommended to you to read. You can also get the e-book from your official web site, so you can quickly to read the book.

##### **Jake Harris:**

Reading can called imagination hangout, why? Because when you find yourself reading a book mainly book entitled *Multiple Solution Methods for Teaching Science in the Classroom: Improving Quantitative Problem Solving Using Dimensional Analysis and Proportional Reasoning* your head will drift away trough every dimension, wandering in every aspect that maybe unfamiliar for but surely can become your mind friends. Imaging each and every word written in a publication then become one type conclusion and explanation this maybe you never get just before. The *Multiple Solution Methods for Teaching Science in the Classroom: Improving Quantitative Problem Solving Using Dimensional Analysis and Proportional Reasoning* giving you a different experience more than blown away the mind but also giving you useful data for your better life with this era. So now let us show you the relaxing pattern here is your body and mind will be pleased when you are finished reading it, like winning a casino game. Do you want to try this extraordinary shelling out spare time activity?

**Sara Kelly:**

Reading a book to become new life style in this year; every people loves to go through a book. When you examine a book you can get a great deal of benefit. When you read books, you can improve your knowledge, because book has a lot of information on it. The information that you will get depend on what kinds of book that you have read. In order to get information about your analysis, you can read education books, but if you want to entertain yourself look for a fiction books, these us novel, comics, and soon. The Multiple Solution Methods for Teaching Science in the Classroom: Improving Quantitative Problem Solving Using Dimensional Analysis and Proportional Reasoning provide you with a new experience in looking at a book.

**Charles Myers:**

In this period of time globalization it is important to someone to get information. The information will make a professional understand the condition of the world. The condition of the world makes the information easier to share. You can find a lot of sources to get information example: internet, newspapers, book, and soon. You can observe that now, a lot of publisher that will print many kinds of book. Often the book that recommended to you personally is Multiple Solution Methods for Teaching Science in the Classroom: Improving Quantitative Problem Solving Using Dimensional Analysis and Proportional Reasoning this guide consist a lot of the information of the condition of this world now. This particular book was represented how do the world has grown up. The vocabulary styles that writer value to explain it is easy to understand. Often the writer made some investigation when he makes this book. That is why this book ideal all of you.
