Editorial Review

Review

"Shafer...and Vovk...explain how probability can be based on game theory rather than measure theory, and how doing so allows it to be used in finance with out a lot of distracting an confusing assumptions about randomness." (*Reference & Research Book News*, November 2001)

"...an interesting new mathematical and philosophical framework for probability..." (*Zentralblatt Math*, Vol.985, No.10, 2002)

"...a creative, entertaining and imaginative book..." (*Short Book Reviews*, August 2002)

"The first half of this truly original book introduces a novel approach to probability, founded on game theory rather than measure theory. In an admirably clear, scholarly and engaging manner, it traces its historical antecedents, expounds its advantages, develops its technicalities, and addresses its philosophical implications. The second half goes on to do the same for financial modelling. This is a book that should utterly change the way we think about its two topics."

Philip Dawid (University College London, UK)

From the Back Cover

A new game-theoretic approach to probability and finance

Probability and Finance presents essential reading for anyone who studies or uses probability. Mathematicians and statisticians will find in it a new framework for probability: game theory instead of measure theory. Philosophers will find a surprising synthesis of the objective and the subjective. Practitioners, especially in financial engineering, will learn new ways to understand and sometimes eliminate stochastic models.

The first half of the book explains a new mathematical and philosophical framework for probability, based on a sequential game between an idealized scientist and the world. Two very accessible introductory chapters, one presenting an overview of the new framework and one reviewing its historical context, are followed by a careful mathematical treatment of probability's classical limit theorems.

The second half of the book, on finance, illustrates the potential of the new framework. It proposes greater use of the market and less use of stochastic models in the pricing of financial derivatives, and it shows how purely game-theoretic probability can replace stochastic models in the efficient-market hypothesis.

From reader reviews:

Larry Parrish:

Why don't make it to be your habit? Right now, try to ready your time to do the important take action, like looking for your favorite publication and reading a guide. Beside you can solve your short lived problem; you can add your knowledge by the e-book entitled Probability and Finance: It's Only a Game!. Try to the actual book Probability and Finance: It's Only a Game! as your close friend. It means that it can to get your friend when you experience alone and beside regarding course make you smarter than previously. Yeah, it is very fortunated for you personally. The book makes you far more confidence because you can know every little thing by the book. So , we need to make new experience as well as knowledge with this book.

What do you think about book? It is just for students since they are still students or it for all people in the world, exactly what the best subject for that? Only you can be answered for that concern above. Every person has several personality and hobby per other. Don't to be forced someone or something that they don't would like do that. You must know how great in addition to important the book Probability and Finance: It's Only a Game!. All type of book are you able to see on many resources. You can look for the internet sources or other social media.

Ruth Frye:

People live in this new morning of lifestyle always attempt to and must have the time or they will get large amount of stress from both everyday life and work. So , once we ask do people have free time, we will say absolutely indeed. People is human not a robot. Then we question again, what kind of activity are there when the spare time coming to an individual of course your answer can unlimited right. Then ever try this one, reading books. It can be your alternative with spending your spare time, the actual book you have read is definitely Probability and Finance: It's Only a Game!.

Rachel Cady:

What is your hobby? Have you heard that question when you got students? We believe that that question was given by teacher to their students. Many kinds of hobby, Everybody has different hobby. And you know that little person just like reading or as looking at become their hobby. You should know that reading is very important as well as book as to be the issue. Book is important thing to provide you knowledge, except your current teacher or lecturer. You will find good news or update in relation to something by book. Amount types of books that can you go onto be your object. One of them is actually Probability and Finance: It's Only a Game!.
